Let's Start!

Important details of forms in the .NET framework

Learning Outcome:

Understand important information about client software for the identity metasystem in spoken or written documents.

Ask your partner:

- What do you know about comprising information from data base? Would you like to know more? Why?
- What characteristics do you consider important to create a form for an application?

Can Do Statements:

- I can say what a form is in the .NET framework is.
- I can talk about different features of forms as classes and controls.
- I can explain why the form is the primary vehicle of interaction in the .NET framework.

Let's Explore!

Anderson and Melisa study for the next Monday's exam.

Instructions: Read the text below.

- Melisa:** I'm studying so hard, but I'm not ready for next Monday's exam.
- Anderson:** You will pass the exam. If you want, we can study together before the exam quickly.
- Melisa:** Honestly, I don't have time next Monday, and that makes me feel under pressure; however, we can study now.
- Anderson:** Yes, ask me!
- Melisa:** What is a form in the .NET framework?
- Anderson:** A form is a bit of screen real state, but it's important to mention that in the .NET framework, it's a new platform for application development. You can use it to present information to the users and to accept input from them. Also, forms can be considered as standard windows, dialog boxes, multiple document interface (MDI), among others.
- Melisa:** But, don't forget that in the .NET framework, forms are instances of classes too. You answered very well! Now, it's my turn! Tell me about some important features of forms.
- Anderson:** Forms are objects that show features that define their appearance and methods. By writing code to respond to its events, you can tailor-make the object to meet the requirements of your application.
- Melisa:** And, what about the classes and controls?
- Anderson:** When you create the form with the Windows Forms Designer, it becomes a class. For that reason, when you display an instance of the form at run time, this class is the template used to create the form; moreover, forms are controls, as they derive from the Control class.
- Melisa:** Tomorrow, I have to study it carefully. Finally, would you tell me why the form is the primary vehicle for interaction in the .NET framework?
- Anderson:** Fortunately, I know that one. It's the primary vehicle because you can get information from the user and answer to it; plus, you can work with existing stores data and query, and write back to the file system.
- Melisa:** Very good!

Let's Practice!

Defining Forms in .NET Before the Exam

Instructions: Read the paragraph. Underline all the mistakes in the paragraph.

Melissa: I'm studying so hard , but I'm not ready for next Monday's exam.

Anderson: If you want, we can study forms in .NET framework before the exam quickly.

Melissa: Honestly , I think it's not enough; anyway, let's do it.

Anderson: Remember a form is a bit of screen real state. In the .Net framework, it is well known as a new platform for application development.

Melissa: We can use it to present information properly to the users and to accept input from them.

Let's Practice!

Melisa wants to continue studying for her exam.

Instructions: Select the correct answer.

1. I probably _____ time on Monday, and that makes me feel under pressure.
 - a. will not have
 - b. will not has
 - c. will have
 - d. having

2. Forms are objects that show features which _____ only their appearance but also their methods.
 - a. will define
 - b. defines
 - c. defining
 - d. will not define

3. I maybe _____ the code merely to execute to its events but also to respond.
 - a. will write
 - b. writes
 - c. wrote
 - d. won't write

Extension Activity

Let's explain how applications works to create forms.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about Microsoft .NET framework usages.
- Write notes and describe the process to design basic objects with forms in a guide.
- Use formal language and well develop organization.
- Share with your partner and check their questions.

Self-Assessment

Yes

No

- I look for information about Microsoft .NET framework usages.
- I describe the process to design basic objects with forms in a guide.
- I talk about .NET applications and form design.

☐ ☐☐ ☐☐ ☐

Target Words

- **derive** (verb): to have as origin of something
e.g. They derive from the Control class.
- **query** (noun): instructions to know how to look for information in a database
e.g. Plus, you can work with existing stores data and query, and write back to the file system.
- **requirement** (noun): prerequisite to do something
e.g. You can tailor-make the object to meet the requirements of your application.
- **tailor-make** (verb): to customize
e.g. You can tailor-make the object to meet the requirements of your application.
- **file system** (noun): computer setup that keeps information from a data base
e.g. Plus, you can work with existing stores data and query, and write back to the file system.
- **moreover** (adverb): in addition; furthermore
e.g. Moreover, forms are controls.

Learning Points

The Future With Will, Going to, the Present Continuous and the Present Simple in Negative Form

We can make reference to future events in **negative**.

WILL

The use of the form **will** does not change when it is presented in its negative form. Remember that you use the form **will** to talk about future opinions, predictions, spontaneous decisions, and promises.

To create **negative** sentences, you have to follow this structure:

Subject + **won't (or will not)** + verb (base form) + complement

For example:

*He **won't** learn anything about computers in that company.*

*Shena **will not** miss today's meeting.*

GOING TO

It is important to take into account that you use **going to** to talk about future predictions based on the present or plans you've already decided on.

To create **negative** sentences, you have to follow this structure:

Subject + **am/is/are** + **not** + going to + verb (base form) + complement

For example:

*I **am not going to** write using that language; it is too difficult.*

*She **isn't going to** come to the meeting.*

PRESENT CONTINUOUS

Keep in mind that the **present continuous** tense can express plans and arrangements in the near future only when they are already scheduled to take place in a specific moment, day, or hour.

To create **negative** sentences, you have to follow this structure:

Subject + **am/is/are** + **not** + verb (-ing form) + complement

For example:

*We **are not meeting** until the software is ready and approved.*

*I **am asking** the investors in our next meeting what they think about the new product.*

PRESENT SIMPLE

Remember that you can use the **present simple** tense to talk about situations that are scheduled or already arranged.

To create **negative** sentences, you have to follow this structure:

Subject + **do/does** + **not** + verb (base form) + complement.

For example:

*The engineers **do not approve** the software until tomorrow.*

*The meeting **does not finish** until 9 p.m.*

Learning Points

Examples

- *I'm studying so hard, but I'm not ready for the next Monday's exam.*
- *You will pass the exam.*

Adverbs of Manner

You use **adverbs** to give information about how something happens. Today, we will check the **adverbs of manner**.

When we want to show the way something takes place, we use the **adverbs of manner**. They are generally placed after the main subject or object of the sentence or at the end of the clause.

Most of the adverbs we use end in **-ly**, but there are some exceptions. Now, take a look at the following chart to learn about some of the most common adverbs of manner:

Adverbs of manner	
Well	Hard
So	Quietly
Quickly	Accidentally
Closely	Honestly
Regularly	Seriously

Examples

- *If you want, we can study together before the exam quickly.*
- *Tomorrow, I have to study it carefully.*
