Let's Start!

Let's write about .NET programming.

Learning Outcome:

Talk about principles, concepts, and characteristics of general-purpose computer programming language in spoken and written situations.

Ask your partner:

- What do you think are the advantages of language interoperability?
- Do you think there should be a standardized software framework that can be used to run any kind of applications? Why? Why not?

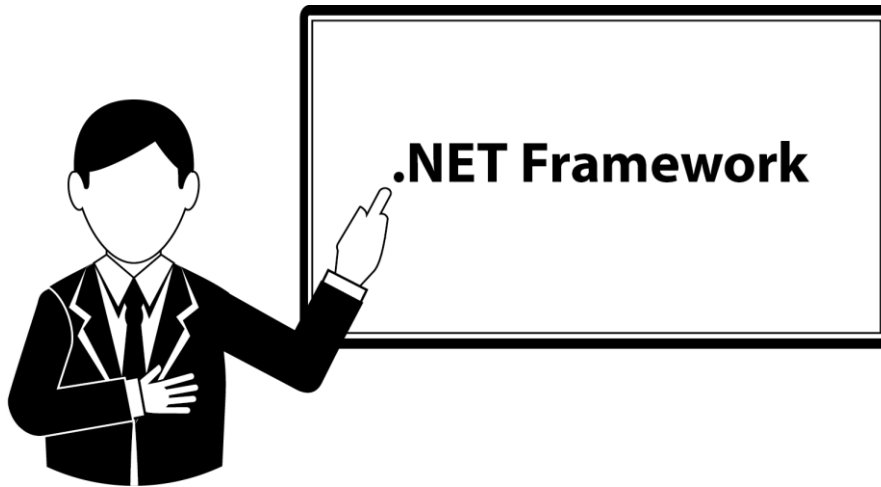

Can Do Statements:

- I can understand written information about the importance of .NET programming for a software development company.
- I can identify vocabulary and synonyms in a text about the importance of .NET programming for a software development company.
- I can write a text about the importance of .NET programming for a software development company.

Let's Explore!

An expert in technology is giving a speech about .Net programming.

Instructions: Read the text below.

Hello, everyone. Today, we'll discuss the importance of .Net programming in our software development company. .Net has established a new way software is developed nowadays. It is now clear that the .Net framework is going to help the platforms we already use for software development. We've got to take into account that this framework is going to broaden the focus of the internet and allow us to keep an appropriate control of the information. When program designers work on the creation of software, they trust in this framework due to its effectiveness to undertake various tasks. We, as an innovative software development company, are going to have to implement advantageous techniques in order to be successful in the field of software design.

.Net framework is going to become an excellent tool for us when creating applications since it will enable you all to develop, manufacture, and implement them in any Windows-based system. One of the things that you are going to have to acquire is an advanced knowledge of software languages through this framework. It is very important to know the language you are using so that you can take advantage of the framework. You have got to understand that many programs are based on this framework so that they can run correctly on each computer. If you are designing or installing an application or program, you will notice that it won't generate any error, and it'll run and update faster.

Therefore, we are going to make use of the .Net framework in every as possible so that we can meet the expectations of our customers regarding security, stability, manageability, and the correct functioning of the products we deliver.

**Let's Practice!**

.NET is important in software companies.

Instructions: Circle the correct option to complete each sentence.

1. We are (got / got to / have got to) use .NET to broaden our possibilities.
2. We ('s going to have / 're going to have to / are going to have) choose a tool that performs various tasks.
3. The programmer (has got to / have got to / gets to) combine popular languages in .NET.
4. The staff (are going to have to / is going to have / go to have to) to work with a tool executable in myriad frameworks.
5. My company (has got to / have got / is got to) to develop technology to meet the customers' expectations.

**Let's Practice!**

.NET has lots of uses.

Instructions: Select all the correct answers.

1. Which of the statements below are advantages of .NET?
 - a. .NET is going to broaden the applications on internet in the future.
 - b. .NET is going to limit the possibilities in web creation.
 - c. .NET will help us perform just a single task.
 - d. .NET is going to be improved for people to control the amount of information entering their systems.
 - e. Tomorrow morning, Mr. Norton are attending a conference on how .NET provides tools for the development and implementation of services.
 - f. .NET gives programmers the possibility to do everything using one OOP language.

Extension Activity

Now, it's your turn.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about .NET.
- Write a short text about its benefits and advantages paraphrasing. Paraphrase.
- Share it with your partners.

Self-Assessment

Yes

No

- I read information about .NET.
- I paraphrase what I've read.
- I write about the benefits of .NET.

☐	☐
☐	☐
☐	☐

Target Words

- **broaden** (verb): to amplify or extend
e.g. We've got to take into account that this framework is going to broaden the focus of the internet and allow us to keep an appropriate control of the information.
- **undertake** (verb): to assume the duty of something
e.g. When program designers work on the creation of software, they trust in this framework due to its effectiveness to undertake various tasks.
- **enable** (verb): to give power or ability
e.g. .Net framework is going to become an excellent tool for us when creating applications since it will enable you all to develop, manufacture, and implement them in any Windows-based system.
- **update** (verb): to bring up to date or incorporate new information
e.g. If you are designing or installing an application or program, you will notice that it won't generate any error, and it'll run and update faster.
- **acquire** (verb): to gain something through effort
e.g. One of the things that you are going to have to acquire is an advanced knowledge of software languages through this framework.

Learning Points

Have Got to and Going to Have to for What Is Necessary

When you want to express that something is important or necessary to do, you can use **have got** and **going to have to**.

For both cases, it is necessary to consider the correct syntax and the appropriate subject-verb agreement.

Example:

Nate **has got to** try different programming languages.

I **have got to** update this application.

Now, have a look at the examples with **going to have to**:

Sarah **is going to have to** program using .Net framework.

Nick and Brenda **are going to have to** take a training course on C++.

Examples

- We've got to take into account that this framework is going to broaden the focus of the internet and allow us to keep an appropriate control of the information.
- One of the things that you are going to have to acquire is an advanced knowledge of software languages through this framework.

How to Paraphrase Information in a Text

When you **paraphrase**, you are writing the same information using your own words.

It is important to learn to paraphrase in order to focus concisely on a single main idea and to take information from another person in a legitimate way.

There 6 steps for effective paraphrasing:

1. Read several times, if necessary, the original article or text until you have a complete understanding of the topic.
2. Start to write down ideas in your own words keeping the original text aside.
3. Make a comparison between your text and the original. See if your version accurately expresses all the essential information.
4. Use quotation marks for expressions or ideas you take directly from the original text. Identify key words and try to look for synonyms to convey the same meaning.
5. Use a note card to write your paraphrased text and record the source including the page.
